

PACK BOY

MODULAR PACK LIFTING

The Pack Boy™ is a modular lifting kit to aid un-loading and handling of packs of composite construction panels.

Supplied to site in component form for site assembly, the Pack Boy™ consists of a sectional spreader beam, self-leveling crane forks and all necessary components to suspend the system direct from a suitable crane. All components are delivered and stored in a galvanized steel stillage for convenience and ease of transportation and storage.

The Pack Boy™ should take approximately 30 minutes to fully assemble and once complete it is capable of handling panel packs up to 20m long, 1.2m high and up to 4000Kg total weight.

The Pack Boy™ is available for hire at the following standard rates -

Delivery to site – economy 2-3 day service	£125.00
Daily hire rate	£150.00/day
or	
Weekly hire rate	£250.00/week
Collection from site	£125.00

Site training is not necessary – Pack Boy™ is designed for self-assembly and full instructions are provided. Site assembly should take two men approximately 30 minutes. However, we can offer a site training and assembly service for a standard charge of £100.

For customer's anticipating staged panel deliveries we offer a special "stand down" rate of £30 per day.

Special discounts are available for combined hire of the Pack Boy™ in combination with one of our Clad Boy® or Rota Boy® vacuum lifting machines. Please ask for details.

All orders must be confirmed in writing and must be accompanied by an official order number. For account and payment details, please contact 4 Cladding Services.

Hire of the Pack Boy™ is subject to our terms and conditions and customers will be liable for the full replacement cost of any component not returned in good condition at the end of the hire period. Full hire terms and conditions are available on application. All payments are strictly to our 30-day terms.

All rates are subject to VAT and are valid from 1st March 2010 until further notice.
